SUMMARY

Junior IT Support with C1 English, ready to handle user requests in English and Polish. I troubleshoot and configure Windows and Linux, VMware virtual machines and network services (DNS, DHCP, SSH) in my own home lab. Assisted staff with printers, documents and files during two IT internships. Graduate of a programming-profile technical school with the INF.03 qualification, completing the Google Cybersecurity Professional Certificate.

SKILLS

- **User support:** troubleshooting, incident documentation and escalation, printer support, help with documents and files, technical documentation
- **Operating systems:** Windows, Linux (Ubuntu), Linux command line, Qubes OS
- **Infrastructure and virtualisation:** VMware, Windows/Linux virtual machines, Raspberry Pi, SSH, Linux web server, backups, BIOS/firmware (coreboot)
- **Networking:** TCP/IP, DNS, DHCP, HTTP/HTTPS, LAN, Pi-hole
- **Security:** Wireshark, tcpdump, VirusTotal, incident analysis, phishing, AES-256-GCM, SHA-256
- **Programming and tools:** Python, Bash, SQL (basic), C# (basic), Git/GitHub

TECHNICAL PROJECTS

Home IT Lab | Linux, VMware, Raspberry Pi

- Set up a Linux server with SSH access and a website, plus a Pi-hole DNS server on Raspberry Pi 4, to practise configuring network services hands-on.
- Built Windows and Linux test environments on VMware virtual machines.
- Flashed coreboot firmware on a ThinkPad T440p, programming the BIOS chip via Raspberry Pi following the Skulls project documentation.

Minecraft Game Server | Bash, Linux

- Wrote a Bash backup script for the server that creates tar.gz archives, excludes unneeded directories and verifies that the operation succeeded.

Cryplab | Python, cryptography

- Built a command-line app for hashing text and files (SHA-256) and encrypting text (AES-256-GCM) using the hashlib and cryptography libraries.
- Designed chunked file reading, Base64 encoding, key export and a modular code structure.
- Verified the app with 9 passing functional tests, including rejection of a wrong key and a tampered ciphertext.

Incident Analysis | Google Cybersecurity Professional Certificate

- Analysed phishing, DNS outage and SYN flood scenarios, separating observations from hypotheses and proposing next steps.
- Inspected network traffic in Wireshark and tcpdump and checked file reputation in VirusTotal.
- Kept an incident handler's journal and justified escalation decisions.

Retro Forum | Next.js, TypeScript, Prisma, SQLite

- Developed a web application with AI assistance, personally reviewing the authentication, authorisation and session-handling code.
- Analysed the project's security: JWT sessions, bcrypt password hashing and login rate limiting, on SQLite with a Prisma data layer.

WORK EXPERIENCE

IQFM | Retail Merchandiser | 07/2026 – 08/2026

- Served customers face to face in store and prepared reports on completed work.
- Restocked and displayed merchandise.

H2B | IT Intern | 03/2024 – 04/2024 and 03/2025 – 04/2025

- Assisted staff with printer use and with documents and files.
- Wrote Python algorithms that find the shortest path to a target.
- Agreed with the team how to carry out assigned tasks.

EDUCATION AND CERTIFICATIONS

- **Google Cybersecurity Professional Certificate** | Google | in progress, final stage
- **Tools of the Trade: Linux and SQL** | Google | 07/2026
- **Technical secondary school, programming profile** | Pomorskie Szkoły Rzemiosł | 2021 – 2026 | Matura, INF.03 vocational qualification (building and administering websites, web applications and databases)

LANGUAGES AND ADDITIONAL INFORMATION

- **English:** C1 (communication and technical documentation) | **Polish:** native
- **Driving licence:** category B
