A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated

Ticket comments
I found that an employee had downloaded and opened a malicious file from a phishing email. A few things made the email look suspicious: the sender's email address did not match the name "Def Communications," and the message was signed by "Clyde West." The subject and email text also had spelling and grammar mistakes. The email included a password-protected attachment named "bfsvc.exe," which was downloaded and opened on the affected computer. The password was also included in the email itself. I checked the file hash and found that it is already known to be malicious. The alert was marked as medium severity. Because the file had been opened, I escalated the ticket to a Level 2 SOC analyst for further investigation.

Additional information

Known malicious file hash:
54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b

Subject: Re: Infrastructure Egnieer role

Dear HR at Ingergy,

I am writing for to express my interest in the engineer role posted from the website.

There is attached my resume and cover letter. For privacy, the file is password protected. Use the password paradise10789 to open.

Thank you,

Clyde West
